Background

- Neoadjuvant D+T has a high pathologic response rate and impressive short-term survival. 1,2
- The NeoCombi trial (NCT01972347) enrolled 35 patients with resectable stage III melanoma, with last patient commencing treatment April 19th 2017.1

Objectives

· We now report 5-year outcomes from this trial.

Methods

Primary Endpoints

- 1) Complete Pathological Response Rate at Week 12
- 2) RECIST Response Rate at Week 12

Secondary Endpoints

- 1) Surgical Morbidity
- 2) Relapse Free Survival
- 3) Overall Survival
- 4) Toxicity
- 5) Correlation of biomarkers with clinical endpoints

Treatment

- Dabrafenib 150 mg twice daily + Trametinib 2 mg once daily
- 12 weeks prior to therapeutic dissection of pre-therapy tumor bed (neoadjuvant)
- 40 weeks after therapeutic dissection (adjuvant)

Key Eligibility

- •BRAF V600 mutation-positive melanoma
- Histologically confirmed resectable bulky stage IIIB/C melanoma
- •≥18 years
- •ECOG Performance Status ≤1

Assessments

- CT and PET scans at baseline and Week 12
- CT monitoring q12w to 2y then q6mo to 3y. Ultrasound of pre-therapy tumor bed at
- Biopsies at baseline and Week 1.

baseline, week 4, 8 and 12

- Therapeutic dissection of pre-therapy tumor bed at Week 12
- Blood for translational and pharmacokinetic analyses at baseline, Week 1,4,8,12, then 4 weekly
- Pathologic response determined as per INMC criteria and defined as complete (pCR), near complete, partial (pPR) or no response (pNR).³

Results

At data cut August 17th 2021, median F/U was 60 mo (95% CI 56-72).

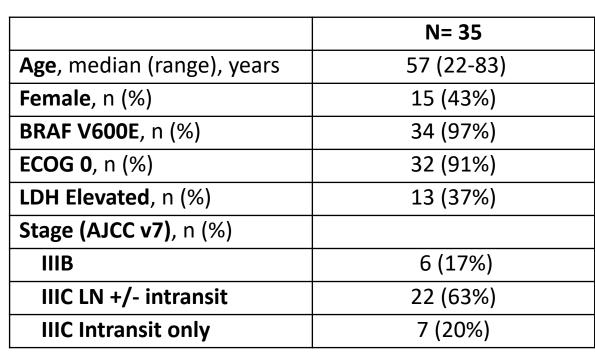

Figure 1. Pathological Response

Table 1. Patient Characteristics

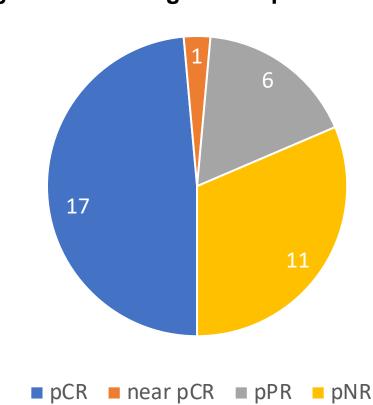

Table 2. Management of local recurrence

| | Local (n=12) |
|------------------------|-----------------|
| Surgery alone | 5 |
| Surgery + neo/adjuvant | 4# |
| Systemic therapy alone | 2~ |
| Observation | 1 |

2 neoadjuvant (ipi/nivo, pembro), 2 adjuvant nivo ~ pembro, nivo/rela

Figure 2. Nature of recurrence (N=21)

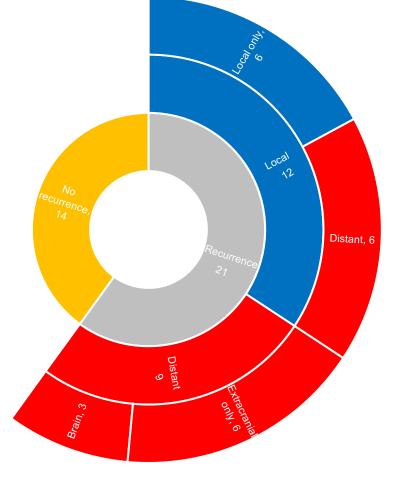

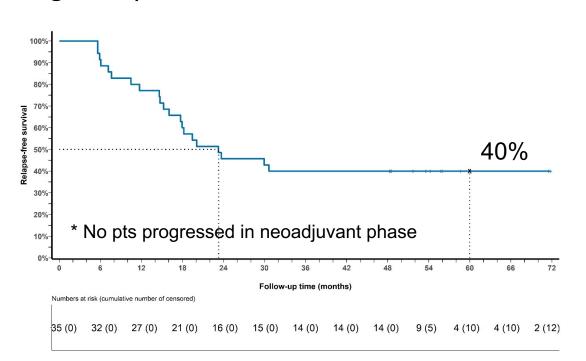

Table 3. Management of distant recurrence

| Drug class | 1 st line (N=15) | Later (N=9)* |
|------------------------|--------------------------------|-----------------|
| Ipilimumab + nivolumab | 7 | 3 |
| PD1 monotherapy | 4 | 1 |
| PD1 + investigational | 2 | 1 |
| Nivolumab + relatlimab | - | 2 |
| BRAF/MEKi | 2 | 6 |
| BRAF/MEKi + PD1 | - | 1 |
| Chemotherapy | - | 1 |

*Some patients had more than one therapy

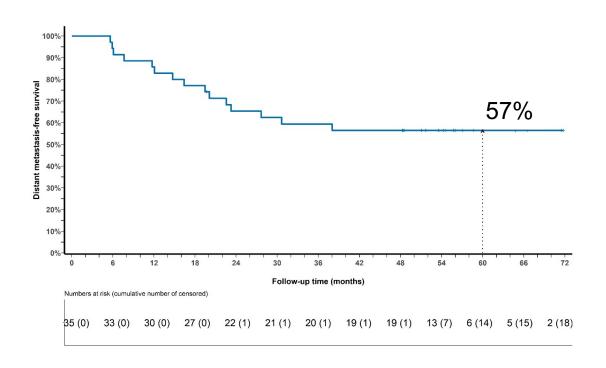

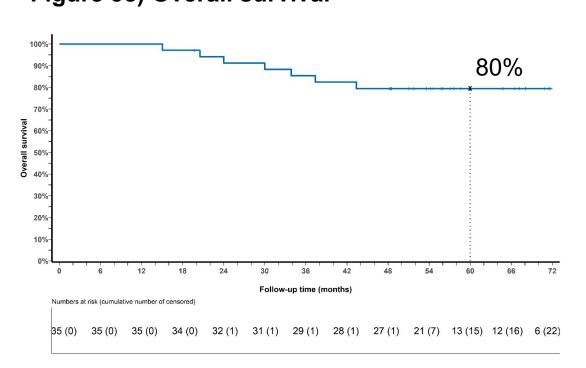

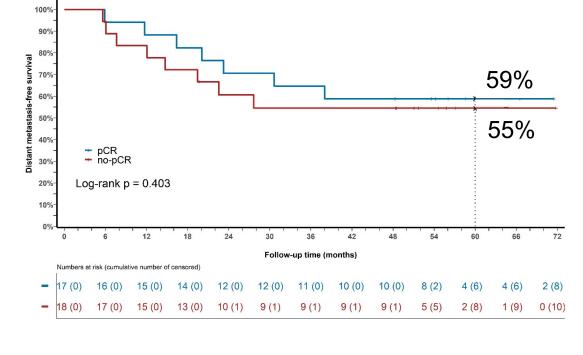

Figure 3c) Overall survival

Log-rank p = 0.205

- 18 (0) 18 (0) 18 (0) 17 (0) 16 (1) 15 (1) 13 (1) 12 (1) 12 (1) 8 (5) 5 (8) 4 (9) 1 (12)

Conclusions

Despite early activity with neoadjuvant D+T, patients remain at high risk of recurrence.

- While those with pCR have improved survival than non-pCR, recurrences frequently occur in contrast to immunotherapy.4
- Targeted therapy also appears to have inferior survival than immunotherapy in the neoadjuvant setting.
